Patented July 30, 1918.

Inventor:

UNITED STATES PATENT OFFICE.

FREDERICK LOBL, OF MIDDLEBORO, MASSACHUSETTS.

GAME.

1,274,294.

Specification of Letters Patent.

Patented July 30, 1918.

Application filed June 21, 1917, Serial No. 176,077. Renewed June 24, 1918. Serial No. 241,691.

To all whom it may concern:

Be it known that I, FREDERICK LOBL, a subject of the Emperor of Austria, and a resident of Middleboro, in the county of 5 Plymouth and Commonwealth of Massachusetts, have invented an Improvement in Games, of which the following description, in connection with the accompanying drawings, is a specification, like characters on the 10 drawings representing like parts.

This invention relates to games, and its object is to provide a novel type of game of which part, at least, shall be in the form of

confectionery.

In the embodiment of my invention described and illustrated herein:

Figure 1 is a plan of the same;

Fig. 2 is a vertical section on the line 2-2 of Fig. 1; and

Fig. 3 is a perspective of one of the blocks showing the method of using the same.

My novel invention comprises, Figs. 1, 2, a suitable box 1 of any desired size and The box is material, herein pasteboard. preferably of such dimensions that it may be divided into an equal number of squares of equal size. Within the box are a plurality of, and in this case eleven, rectangular blocks of confectionery of any preferred 30 kind.

The relative areas of the box 1 and blocks 2 are such that the area is equal, in this case, to twelve of the blocks, eleven blocks being furnished, leaving, therefore, the area

35 of one block vacant.

The blocks may bear any desired insignia or legend, herein individual letters which, when properly positioned, spell the words "dear America."

The blocks may also be colored to suit one's fancy, to add to their attractiveness, and so far as may be possible without impairing the healthfulness of the confection, ery. Herein the blocks bear the national 45 colors, red, white and blue.

To permit the manipulation of the blocks to arrange them as shown from the initially confused condition in which they are adapted to be placed, without using the fingers 50 therefor, I have provided the blocks each with an aperture 5, herein rectangular, to

receive the end of a block manipulating rod 6 which may ordinarily be kept in a suitably shaped space or pocket 7 therefor at one side of the box.

To enable the confectionery blocks to be readily manipulated and avoid any tendency to stick to the receptacle, as in warm weather, I bevel the bottom face of the block in opposite directions, leaving just enough flat sur- 60 face to support the block in upright posi-

Obviously, the object of the game is to arrange the blocks so that the letters will spell the particular word or words for which 65 they are adapted from any disorganized arrangement of the blocks. The foregoing described game besides affording the usual amusement derived from the endeavor to properly arrange the blocks, is also made 70 additionally attractive to many from the fact that the blocks are composed of confectionery or like material which may be eaten when desired.

The national colors shown on the blocks 75 with such patriotic legends as may be spelled thereby, also appeal to one's patriotism and lend additional interest to the game.

It is obvious that the foregoing embodi- 80 ment of my invention may be modified in many detailed respects, all within the spirit of the invention and the scope of the appended claims.

Claims: 1. A game comprising a receptacle, a plurality of edible blocks therein having apertures for receiving a positioning rod end.

2. A game comprising a receptacle, a plurality of blocks of confectionery therein, in- 90 signia on the blocks, and apertures in the blocks for receiving a positioning rod end for arranging the blocks and insignia in a desired order.

3. A game comprising a receptacle 1 hav- 95 ing the legend bearing confectionery blocks 2 therefor, each block having a rod receiving aperture 5, a manipulating rod 6 therefor, and a pocket 7 in the receptacle.

In testimony whereof, I have signed my 100 name to this specification. FREDERICK LOBL.
